Introduction

Vaccine attitude can change disease progress, facilitate herd immunity among the community, and stop disease progression. There is no current curative treatment against the virus according to the available data. The only way to stop the spread of infection is to develop and accelerate the vaccine.

Objective

The study's primary goal is to investigate healthcare workers' knowledge, attitude, and practice toward the COVID-19 vaccine in DubaiHealth Authority, United Arab Emirates.

Methodology

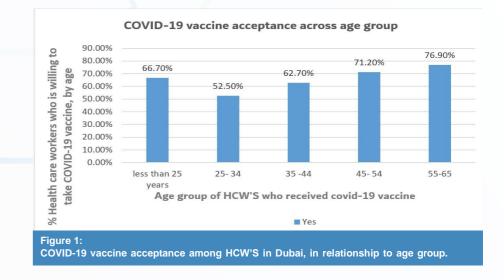

Anonymous cross-sectional comparative study done in April 2021 to measured the willingness and hesitancy in taking COVID-19 vaccine among healthcare providers in Primary Health Care Sector at Dubai Health Authority (DHA).

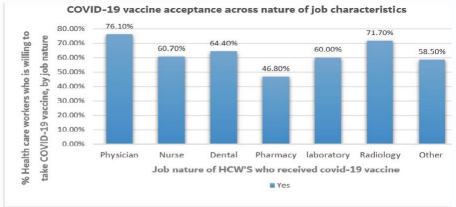

Results

91.6% of Healthcare providers agreed on the significance of COVID-19 vaccine preventing the transmission of illness.

95.6% of Healthcare providers agreed on the importance of COVID-19 vaccine for the public and community.

92.7% of Healthcare providers' agreed to promote COVID-19 vaccination to patients, family, and friends.

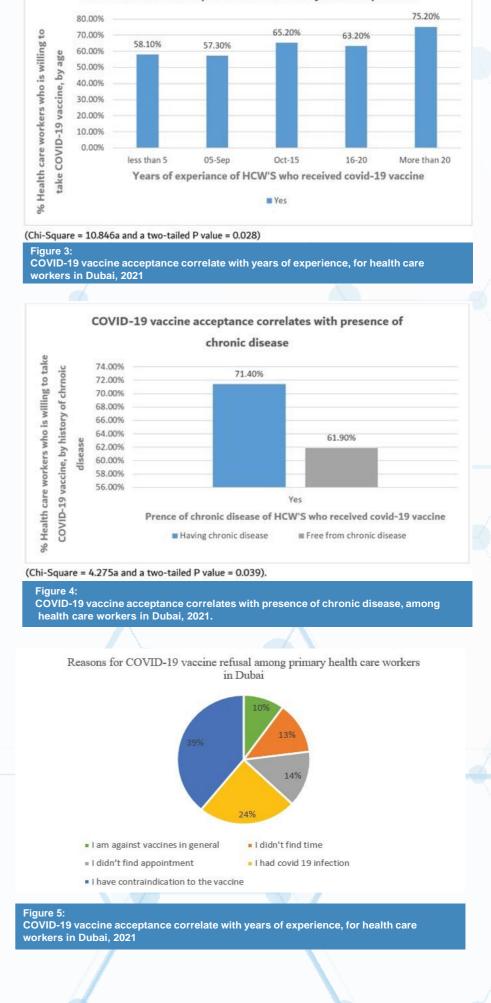

ce across nature of iob characteristics, for health care workers in Dubai, 20

COVID-19 vaccine acceptance correlate with years of experience

Conclusion

COVID-19 vaccine was widely accepted by Dubai's healthcare providers. Several factors were identified as significant determinants of vaccine acceptance. UAE healthcare authorities can use the study's findings to develop public health policies and implement campaigns to address concerns about the COVID-19 vaccine and other emerging infectious diseases.
